Celosia argentea ssp. plumosa, Amaranthaceae

Plume Flower, Cockscomb

Originating in southeast Asia, the Cockscomb is a brightly flowering annual with an erect, bushy habit. Often seen in Arriyadh's gardens, as a pot plant and also planted for winter colour, the loose, feathery, plume-shaped flowers have a wide range of colours, including magenta, yellow and orange. The fresh green, pointed leaves are often bronze-hued. The plant will grow to a height of 1 metre. Propagated by seeds, preferably in the flowering site since they resent disturbance, they like rich well-draining soils in full sun and thrive on sandy soils. Regular irrigation is required and the plants are not very frost-tolerant. Like all annuals planted for winter colour in Arriyadh in October/November, their life is shortened even more by the onset of hot weather in the spring, and plants soon become straggly. Relatively pest-free but maintenance-intensive, the dying flowers should be removed regularly to keep plants looking good, and eventually they will have to be removed. Apart from its use as a colourful ground cover or as a pot plant, C. argentea has no great landscape value.

GENERAL

Origin : tropical
Vigour : fairly fast growing

Humidity : semi-arid, semi-

humid

Propagation: direct sowing,

cuttings

Maintenance : high

CONDITIONS

Dessication : vulnerable
Stagnant water : vulnerable
Irrigation : medium
Salinity/ppm : low (700 ppm)
Hardiness : +3°C

SHAPE

 Type
 : annual

 Height
 : 0.2 m-1 m

 Spread
 : 0.3 m-1 m

 Foliage
 : evergreen

FLOWER

Colour : red, orange, yellow, magenta

Size : 2 cm

Period : January - March

FRUIT

Type of fruit : capsule Fruit size : 0.2 cm
